## RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

**Activity:** Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

**Total Points:** 100

| Criteria                                        | Excellent (100%)                                                                                              | Proficient (75%)                                                                          | Developing (50%)                                                                           | Incomplete (0%)                                    | Score |
|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|----------------------------------------------------|-------|
| <b>VM Type &amp; Version (10 pts)</b>           | Correctly selects <b>Ubuntu (64-bit)</b> as the OS type and version. Matches the downloaded ISO architecture. | Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works. | Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.                   | Fails to select any valid OS type; cannot proceed. | /10   |
| <b>Memory (RAM) Allocation (15 pts)</b>         | Allocates 4-8GB RAM as required. Understands the host system limitation.                                      | Allocates 3GB – 3.5GB (sufficient but slightly below requirement).                        | Allocates 2GB or less — causes severe lag or installation failure.<br><br>Allocates only 1 | Allocates no RAM or invalid value.                 | /15   |
| <b>Processor (CPU) Allocation (15 pts)</b>      | Allocates <b>4 CPU cores</b> with <b>100% execution cap.</b> Enables PAE/NX if available.                     | Allocates 2 cores but does not adjust execution cap or nested VT-x settings.              | core — installation takes extremely long.<br><br>Allocates less                            | Fails to configure processor settings.             | /15   |
| <b>Hard Drive (Storage) Setup (20 pts)</b>      | Allocates <b>100 GB dynamically allocated storage</b> (or fixed). Created a partitioning in drive.            | Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.              | than 20GB — insufficient for installation.                                                 | No hard drive created; VM cannot boot.             | /20   |
| <b>ISO Attachment &amp; Boot Order (15 pts)</b> | Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot                                     | Attaches ISO but forgets to adjust boot order — manually boots                            | Attaches ISO but boot order wrong — VM boots to blank screen.                              | Fails to attach ISO; VM cannot install.            | /15   |

|                                               |                                                                                                                                     |                                                                                     |                                                                                        |                                        |     |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|----------------------------------------|-----|
|                                               | order: <b>Optical → Hard Disk.</b>                                                                                                  | via "Force BIOS" first time.                                                        |                                                                                        |                                        |     |
| <b>Proper Installation Execution (25 pts)</b> | Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI. | Completes installation but makes minor errors (e.g., wrong timezone — fixes later). | Installation starts but fails midway (partitioning error, corrupt ISO, or power loss). | Installation not attempted or aborted. | /25 |

**TOTAL SCORE: \_\_\_\_ / 100**

## DOCUMENTATION REQUIREMENT

**Student Name:** Soriano, Richard S.

**Date:** August 27, 2026

**VM Name:** richard

### 1. VM Specifications Summary

| Component          | Allocated Value                   |
|--------------------|-----------------------------------|
| VM Type / OS       | Ubuntu (64-bit)                   |
| RAM                | <u>6</u> GB ( <u>6000</u> MB)     |
| CPU Cores          | <u>4</u>                          |
| Hard Drive Size    | <u>100</u> GB (Dynamic / Fixed)   |
| Storage Controller | SATA / SCSI                       |
| Network Adapter    | NAT / Bridged                     |
| ISO File Used      | <u>ubuntu-26.04-desktop-amd64</u> |

### 2. Step-by-Step Setup Process

*(Describe what you did, in order. Include commands used, if any.)*

1. Virtual Machine and Operation System Creation using Virtual VM

VirtualBox Manager

2. Ubuntu Preparation

3. Partition Creation

4. Ubuntu Account Creation

5. Ubuntu Installaton

### 3. Issues Encountered & Resolutions

*(List any problems during setup and how you fixed them.)*

|             |                       |
|-------------|-----------------------|
| Issue: None | Solution: Trust him 🙌 |
|-------------|-----------------------|
